

# NANOCLEAN EW

Filtration and pre-treatment plant for mains water, to guarantee optimum quality for your cleaning processes using water.

## DESCRIPTION:

NANOCLEAN EW fine-particle filter the mains water to optimise the quality of industrial cleaning processes using water.

The quality of water from the mains varies depending on:

- the season
- the weather conditions
- the source of supply

## EQUIPMENT:

- Pre-filters for large particles of sludge and sediment
- Sediment filters n Nano-filtration membranes (0.02µm)
- Solenoid valves to control the plant and membranes backflush
- Flow regulation valve n Filtered water degassing unit
- Automation panel
- Compact stainless steel chassis

## OPERATION:

The plant backflush is carried out automatically.

### Simple and quick maintenance:

- Change sediment filters
- Clean system once or twice a year

## BENEFITS:

- Stability of the quality of mains water guaranteed
- Reliability of industrial cleaning processes using water
- Low cost of investment
- Automated device
- Low maintenance
- 3 standard models available (tailored to flow)
- Swiss Design and Manufacture

20/01/20

## THREE STANDARD MODELS\*:

- NANOCLEAN EW-2000 (under 2 m<sup>3</sup>/h)
- NANOCLEAN EW-4000 (3 - 4 m<sup>3</sup>/h)
- NANOCLEAN EW-6000 (5 - 6 m<sup>3</sup>/h)

\*NANOCLEAN EW can be adapted for a flow in excess of 6 m<sup>3</sup>/h

## IMPORTANT :

We strongly recommend using a softener in your mains water before filtering it with the NANOCLEAN EW plant.
